Introduction

Indonesia, with its capital Jakarta located on the island Java, offers investors significant opportunities, such as a large domestic market and access to global mobility through its strategic location along major sea lanes.

Its geographical location in booming South East Asia, a young and comparatively well educated population of approx. 260 million, low production costs and rich natural resources are some of the factors that make it an attractive place to invest. Indonesia is a member of the WTO and ASEAN.

The archipelago, spread over approximately 17,500 islands, has a broad diversity of cultural and linguistic influences; Bahasa Indonesia is the national language but regional languages and dialects remain important. English is the most widely spoken foreign language.

Since the late 1990s, Indonesia has experienced an extended period of political stability, consolidated democratization and economic growth. The Indonesian economy withstood the global financial crisis well, underpinned by strong domestic demand, which is the country's key economic driver.

Despite some weaknesses, such as weak infrastructure and inefficient bureaucracy which bears time-consuming and partially non-transparent administrative proceedings, Indonesia is being increasingly recognized by foreign investors as one of the region's most important and dynamic markets.

Rödl & Partner in Indonesia

Our presence in Asia / Pacific spans over 20 offices in China, Hong Kong, Vietnam, Indonesia, Thailand, Malaysia, Myanmar, Philippines, Singapore and India. In Indonesia, Rödl & Partner operates through an office in Jakarta since 1998. Regulated professional services are provided in collaboration with locally licensed professionals.

We provide the following comprehensive consultancy services in Indonesia:

- Market entry consultancy services, setting up legal presence in Indonesia in form of 100 Percent foreign owned companies, joint ventures and representative offices, including licensing and post-licensing procedures;
- Investment advisory services including due diligence of local business partners and advisory on investment structuring and related contract works;
- Advisory on labor and social security regulations;
- Investment regulatory, tax and finance due diligence,
- Cross-border tax structuring, tax optimization and tax advisory services;
- Tax dispute resolution;
- Tax compliance (monthly and yearly);
- Payroll and outsourcing services;
- Financial audit and assurance service;
- Accounting and bookkeeping service; and
- Trust bank account services.

With the strong network of our worldwide offices we have professionals who possess extensive international expertise to support our consulting works. We also have experienced Indonesian employees at management levels, with profound knowledge of the legal and investment environment as well as taxation and an excellent network with key authorities at both central and local level.

Foreign direct investment

The main legislation governing foreign direct investment (“FDI”) is Law number 25 of 2007 on Investment which regulates investment activities by foreign individually or foreign legal entities in Indonesia by setting up a commercial presence, usually in the form of a foreign investment limited liability company.

Foreign entrepreneurs are subject to the restrictions, particularly maximum foreign ownership ratios, as imposed in the Presidential Decree, being referred to as “Negative List” and corporate requirements under Law number 40 of 2007 on Limited Liability Companies (“Company Law”).

NEGATIVE LIST

Every three years the Government issues a Presidential Regulation regarding the List of Business Fields which are Closed or Open with Certain Conditions for Investment. Basically all business fields are open for investment, except those listed as closed or open with certain conditions. The list of business fields which are closed or open with certain conditions (the “Negative List”) is determined by the aforesaid regulation. The latest Negative List has been issued on 18 May 2016; the next version is expected to be issued by mid 2019.

There are 17 business fields that are conditionally open for capital investment, among others, agriculture, banking, communication and information technology, certain distribution activities, culture and tourism, defense, education, energy and mineral, finance, forestry, health, industry, manpower and transmigration, marine and fisheries, public works, trading, transportation and security.

As implementation of Indonesia’s commitment relating to the ASEAN Economic Community, the new negative list has regulated the foreign investment and/or location particularly intended for ASEAN countries by permitting respective higher participations than for other foreign investors, for certain lines of business.

ONLINE SINGLE SUBMISSION (“OSS”)

In 2018, the Indonesian government relaxed requirements and procedures to carry out business in Indonesia to attract more

foreign investment into the country. In Government Regulation number 24 of 2018 on Integrated Business Licensing Services through Electronic System (“GR 24/2018”) a new licensing system has been introduced to classify, eliminate, consolidate, amend the title and adjust investment licenses and create simplified administrative steps to obtain new licenses as follows:

- User registration;
- grant of business license; and
- grant of commercial / operational license

Under GR 24/2018, the Indonesian government launched a web portal introducing online single submission proceedings on 9 July 2018. The OSS was launched to assist business actors in obtaining business licenses faster and easier.

Users of OSS can be individual and non-individual, the latter including companies as well as state owned legal entities, public service agency, broadcasting agency, business entity established by foundation, cooperative, CV, firm and civil partnership.

Business actors who are registered in the OSS obtain a business identification number (Nomor Induk Berusaha – “NIB”). The NIB is also applicable as corporate registry, importer identification and custom identification number.

Upon obtaining NIB, the business actor may apply for most required business licenses and commercial licenses, depending on the envisaged business activity, through OSS, with the exception of some specific business activities.

PMA COMPANIES

The only corporate form to be chosen as vehicle for FDI is the so called PMA (Penanaman Modal Asing) company, being essentially an Indonesian Limited Liability Company (Perseroan Terbatas, PT) with foreign owned shares. The respective corporate regulations are provided by Law No 40 of 2007 on Limited Liability Companies.

The Indonesian main investment coordinating board BKPM (Badan Koordinasi Penanaman Modal) requires domestic companies to convert their status into a PMA company even if

only some of their shares are purchased by foreign parties and the foreign investor does not hold the majority of the shares. As long as the line of business is open to FDI without restrictions, foreign companies and individuals may establish entirely foreign invested PMA companies unless the respective line of business requires Indonesian participation. It should be noted that foreign companies are in general not permitted to establish branches in Indonesia with exceptions only in the fields of banking and certain energy resource exploration projects.

Corporate Structure

Mandatory organs of a PT company include at least two shareholders (individual or corporate entity), one director and one commissioner. Any higher number is subject to the discretion of the company.

According to the provisions of the Indonesian PT Law, the Board of Executive Directors (BoD) undertakes the corporate management in accordance with the goals and objectives of the company. Members of the Board of Executive Directors have to be appointed by the shareholder meeting (Rapat Umum Pemegang Saham, "RUPS"). In case the Board of Executive Directors consists of two members or more, the sharing of tasks and managerial authorities among the members has to be stipulated on the basis of a RUPS decision. The Board of Commissioners is a mandatory supervisory organ which monitors the activities of the BoD.

Minimum Total Investment

The minimum total investment is IDR 10,000,000,000 (ten billion Rupiah). 25 Percent of total investment, i.e. IDR 2,500,000,000, shall be injected as equity and the remaining balance may be injected as shareholder loan. The ratio between equity and loan accepted by BKPM is 1:3.

Establishment Procedure

Foreign investors may establish a PMA company by signing a Deed of Establishment (DoE) including the Articles of Association before a notary in Indonesia. The DoE, together with certain supporting documents and the proof of capital payment needs to be submitted by the notary to the Minister of Justice and Human Rights for approval.

Subsequently to the company formation, the PMA Company needs to register itself in the OSS and apply for the required business and commercial license through the online system.

REPRESENTATIVE OFFICE

Foreign companies are permitted to set up representative offices of various types for certain timeframes, depending on the Department or Agency that issues the authorizing representative office license. Most representative offices are not permitted to conduct direct commercial activities or render profits in any other way. They are primarily used for promotional, liaison and market research purposes. Set below are the types of representative offices currently permitted in Indonesia.

Trading Representative Office (“TRO”)

The TRO means an Indonesian or foreign national appointed by a foreign company or an overseas company group as representative in Indonesia for promotion and marketing of the company’s products in Indonesia.

To set up TRO, foreign trading company must obtain NIB and apply for a Trading Business License through the OSS.

Foreign Representative Office (“FRO”)

Foreign companies not engaging in trading business may set up a FRO for :

- Handling interests of the company or its affiliated company; and / or
- Preparing the establishment and business development of a foreign investment company operating in Indonesia or another country.

The FRO is led by one or more Indonesian or foreign citizens being appointed by a foreign company or an overseas company group as representative in Indonesia.

To set up the FRO, the foreign company has to obtain a FRO license from BKPM by submitting a respective application through the BKPM online system.

It should be noted that TRO and FRO are not permitted to conduct direct commercial activities or render profits in any way. They are primarily used for promotional, liaison and market research/information gathering purposes.

Construction Representative Office (Badan Usaha Jasa Konstruksi Asing – “BUJKA”)

Since the issuance of Law number 2 of 2017 regarding construction services (“Construction Law”), a foreign construction company which intends to carry out construction services must set up a PMA Company or BUJKA.

The BUJKA is a representative office of a foreign construction company operating in Indonesia, based on the license issued by BKPM to provide construction services within Indonesian territory. The term of license is 3 years and may be extended.

The types of construction services that can be provided by BUJKA comprise:

- construction execution service; and /or
- construction consultancy service.

The BUJKA is only allowed to provide service for complex, high risk and /or high technology construction projects and must have a joint operation agreement with a local construction company.

Prior to obtaining the BUJKA license from BKPM, a foreign construction company shall be registered in the relevant construction association and obtain a certificate of business entity from the construction development agency.

LAND RIGHTS

Foreign invested companies in Indonesia are not permitted to own land bearing the title of hak milik, which grants the holder full ownership rights for an unlimited period. Rather, under the Agrarian Law, FDI companies are allowed to acquire land bearing the title hak guna usaha (right to cultivate the land) with a period of 25 or 35 years depending on the business activities, hak guna

bangunan (right to build on the land) with a period of 30 years and extendable and hak pakai (right to use the land) with a specific period to be determined by the authorities.

CURRENCY REGULATIONS

The Indonesian Currency Law 7/2011 aims to strengthen the acceptance of the Indonesian rupee (IDR) in local and international business transactions and to combat counterfeiting. The previous monetary regulations were provided in various laws and implementing regulations and have been consolidated or replaced in the new law.

The law contains stricter regulations for domestic payment transactions. Accordingly, invoicing and payments within Indonesia are only possible in IDR. In the second paragraph of Article 21, however, the currency law regulates exceptions to the aforementioned restriction. Of particular interest for foreign companies are lit. c. (transaksi perdagangan internasional) and lit. e. (transaksi pembiayaan internasional). While lit. c. refers to payments to or by foreign companies for trade in goods or services rendered at least in part abroad, lit. e. provides that financing and transactions in an international context are exempt from the restrictions of the currency law. In individual cases, especially for transactions with Indonesian foreign subsidiaries, authorities have discretion in the assessment of required "internationality".

Labor and social security regulations

Indonesian employment regulations are detailed and contain provisions that require employers to pay certain benefits during the course of employment, and upon retrenchment. It should be noted that any termination, except in the case of voluntary resignation, generally requires prior approval of the Ministry of Manpower. An employment contract may be limited in time or to a certain project.

The employer is required to provide the employees with certain standard benefits such as a salary including transport and food allowance being subject to a minimum wage which is updated annually by the government, a so called religious allowance in form of an annual payment that equals to one month's salary, health benefits for worker & its legal family members and other social benefits, so called BPJS (Badan Penyelenggara Jaminan Sosial). These include an occupational accident security with specific rates from 0.24 to 1.74 per cent of the monthly salary, a death security of 0.3 per cent, an old age security of 5.7 per cent of which 3.7 per cent are borne by the employer and 2 per cent by the employee, a pension security of 3 per cent of which 2 per cent are borne by the employer and 1 per cent by the employee, and a health care protection security of 5 per cent of which 4 per cent are borne by the employer and 1 per cent by the employee.

There are detailed regulations on the employment of expatriates. Employment of a specific number of expatriates is normally permitted to a PMA Company in its BKPM investment approval. In some cases the employer is required to demonstrate that the job cannot be filled by an Indonesian. Work permits are only valid for one year, but may be renewed.

Tax system

CORPORATE INCOME TAX

Taxation in Indonesia is determined on the basis of residency and source. A corporation that is incorporated or domiciled in Indonesia is considered as an Indonesian tax resident. The tax obligations as a resident taxpayer shall also apply to a foreign company carrying out business activities through a permanent establishment (PE). The corporate tax rate is 25 Percent on taxable income.

A tax reduction of up to 50 Percent is granted for corporate taxpayers with annual gross revenue less than IDR 50 billion. Alternatively, a final corporate income tax of 1 Percent up to June 2018 and 0.5 Percent onwards on monthly revenue is provided for a company that has revenue less than IDR 4.8 billion per year, under certain conditions.

Corporations listed on the Indonesian stock exchange may be granted a reduction of Corporate Income Tax by 5 Percent, if certain requirements are fulfilled.

Tax Payment

Corporate tax liability of resident corporate taxpayers and Indonesian PEs are settled by the way of self-payment, withholding by third parties, or a combination of both. If foreign companies do not have a PE in Indonesia, their tax liabilities in respect of their Indonesian-sourced income needs to be settled by way of withholding by the Indonesian party paying the income.

Calculation of Taxable Income – Non-Deductible Expenses

Taxable income of a corporate tax resident is calculated based on normal accounting income as adjusted with certain tax adjustments.

Generally, all legitimate business expenses are deductible from assessable income to calculate taxable income. However, there are a number of specific limitations from this general rule. These non-deductible expenses are specified in the law or implementing tax regulations. These include, among others:

- Benefits-in-kind provided by the employer to the employee (however, this is also subject to certain exceptions, e.g. meals)

- and uniforms provided to all employees are deductible, as well as benefits provided in certain qualifying remote areas);
- 50 Percent of depreciation, operating and maintenance costs for cars and hand phones provided to employees;
 - Distribution of profits;
 - Gifts and donations, except zakat (Islamic alms);
 - The creation of general provisions / reserves; except for doubtful debts provisions for banks, insurance companies and financial lease companies, and provisions for the reclamation costs of mining companies;
 - Income tax;
 - Tax penalties;
 - Expenses relating to income which is taxed through a final rate withholding tax system and income which is otherwise exempt from tax; and
 - Private expenses

Calculation of Taxable Income – Depreciation / Amortization

Under the law, assets with a beneficial life of more than one year are depreciated or amortized using the straight-line or declining balance method, as follows:

Type of Assets	Beneficial Life (years)	Tariff of Depreciation / Amortization	
		Straight-Line	Double Declining
Non-real-estate fixed assets			
Category 1	4	25 %	50 %
Category 2	8	12.50 %	25 %
Category 3	16	6.25 %	12.50 %
Category 4	20	5 %	10 %
Buildings			
Permanent	20	5 %	
Non Permanent	10	10 %	

Calculation of Taxable Income – Thin Capitalization Rules

Pursuant to Thin Capitalization regulations, the borrowing cost is deductible for tax purposes if the taxpayer's debt to equity ratio amounts to maximum 4:1. Hence, if such DER exceeds the threshold, the excess cost will be non-deductible for income tax calculation. The rules do not apply for taxpayers in certain industries, i.e. banks, financial institutions, insurance and reinsurance companies, infrastructure operations, upstream oil and gas and mining under certain government contracts, and for taxpayers subject to final income tax which are guided by special rules.

Moreover, taxpayers who have a negative equity will not be allowed to deduct any borrowing cost in income tax calculation. The rule applies to both related and non-related debt transaction and for foreign debt; taxpayers shall submit a report on the amount of debt to the tax authorities, otherwise the borrowing cost will not be deductible.

Tax System

Members of a group of companies are taxed individually as there are no group relief provisions available. Effective from 2008 fiscal year, the statute of limitation is reduced to 5 years. Tax losses can be carried forward for maximum 5 years and carry-back of losses is not permitted.

Tax Incentives

The Directorate General of Taxes (DGT), based on the recommendation of the National Board of Investment (BKPM), may grant the following tax incentives to limited liability (PT) companies pursuant to their investments in certain designated business areas or in certain designated regions:

- Reduction in income tax subject up to 5 Percent per year of the invested capital within 6 years of commercial production provided that the assets invested are not transferred within this period;
- Acceleration of depreciation;
- Extension of tax loss carry-forwards up to 10 years;
- A reduction to 10 Percent in the withholding tax on dividends paid to non-residents.

Transfer Pricing

Under the law, transactions between related parties must be dealt with consistently using the arm's-length principle. If deviation takes place, the DGT is authorized to recalculate taxable income or deductible costs arising from such transactions with reference to the arm's length principle. In practice, this generally means that the taxpayers have wide responsibilities for maintaining and providing information to substantiate their pricing methods.

The Minister of Finance issued Decree No. 213 in December 2016 that requires certain taxpayers to prepare transfer pricing documents which consists of Local File, Master File and Country by Country Reporting (CbCR), where applicable, for the tax year 2016 and onwards.

Master File and Local File are mandatory for taxpayers who have a transaction with a related party which:

- in previous year had an annual gross turnover exceeding IDR 50 billion (if the tax payer has operated for less than 12 months, the turnover should be annualized)
- in previous year had annual related party transactions exceeding:
 - IDR 20 billion for transactions involving transfer of tangible goods
 - IDR 5 billion for each transaction on service, interest payment, intangible or other transactions that are defined as high risk transaction
- the related party is domiciled in a country or jurisdiction with a corporate income tax rate lower than the Indonesian corporate income tax rate

The CbCR is mandatory for taxpayers who:

- Become parent company of a group
- Have current year consolidated gross turnover of a minimum of IDR 11 Trillion
- Are member of group companies if the parent company:
 - does not require CbCR, or
 - does not have an Exchange of Information agreement with Indonesia; or
 - CbCR cannot be accessed by Indonesia tax authority

INDIVIDUAL INCOME TAX

Tax Residence

Individual resident taxpayers are individuals that:

- are domiciled in Indonesia; or
- stay in Indonesia for more than 183 days in any 12-month period; or
- are present in Indonesia in a tax year and intending to reside in Indonesia.

Tax Rates

Resident individual income is subject to income tax at the following general tax rates:

- 5 Percent on the first IDR 50,000,000 taxable income
- 15 Percent on the next IDR 200,000,000 taxable income
- 25 Percent on the next IDR 250,000,000 taxable income
- 30 Percent on exceeding IDR 500,000,000 taxable income

Tax Payment

Payments of individual income tax are mostly made by way of withholding by third parties. Employers are required to withhold income tax from the salaries and other compensation payable to their employees on a monthly basis.

WITHHOLDING TAXES

Taxpayers are subject to a number of obligations to withhold taxes on various payments to residents and nonresidents. The tax withheld from payments made to residents may represent either a final income tax on the income for the recipient, or prepaid tax which is creditable or refundable by the recipient against their final tax liability. Most withholding taxes must be paid by the 10th day of the month following payment or its accrual in the books, whichever is earlier. These withholding taxes are commonly referred to by the relevant article of the Income Tax Law.

VALUE ADDED TAX

Value Added Tax (VAT) is an indirect tax imposed on events involving delivery of taxable goods or provisions of taxable services in the Indonesian Customs Area. The general VAT rate is 10 Percent, while for export the rate is 0 Percent. The rates are generally applied against a VAT base equivalent to sales price/service fees or import / export value.

LAND AND BUILDING TAX

Land and Building (L&B) tax is a type of property tax, chargeable on every piece of land and / or building. Land and Building effective tax rate is either 0.1 Percent or 0.3 Percent of the NJOP (Government's pre-determined value of land and building).

PROCEDURAL ISSUES

Tax Assessment

Indonesia adopts a self-assessment system, where taxpayers are trusted to calculate, pay, and report their own taxes by themselves in accordance with prevailing tax laws and regulations.

The DGT, however, may conduct an audit and issue tax assessment letters, which may contain interest and / or administrative penalties, to a particular taxpayer if it finds that, based on a tax audit or other information, the taxpayer has not fully paid its tax liabilities.

Tax Audits

Effective for 2008 fiscal year onward, generally DGT may conduct a tax audit within (5) five years after a tax year has ended. A return that is lodged showing an overpayment of tax will automatically trigger a tax audit. The DGT will issue a tax assessment letter as a confirmation of the tax audit result, which can be a nil, underpayment, or overpayment (refund) tax assessment.

Tax Dispute Resolution

Should a taxpayer not agree with an assessment letter issued by the DGT an objection against it can be filed within three months

after the date of issue. The taxpayer must provide a reason for the disagreement with the tax assessment based on a statement of his calculated tax due.

A decision has to be issued by the DGT within 12 months. If there is no decision made within this period the DGT agrees with the objection of the taxpayer.

A decision which is issued by the DGT within 12 months and is not (fully) accepted by the taxpayer can be appealed within 3 months in front of the Tax Court and further instances up to the Supreme Court.

A taxpayer who does not agree with the tax office's adjustment as per the tax assessment letter may choose not to pay the tax stated in such assessment letter. However, if the objection letter is rejected by the DGT, there will be 50 Percent surcharge of the tax liability that was not paid by the taxpayer. The surcharge will be increased to 100 Percent if the taxpayer continues to file an appeal with the Tax Court which is then rejected.

Audit requirements and practices

INVESTOR CONSIDERATIONS

In respect of the audit requirement in Indonesia there are some particularities. Not all companies are required to have a statutory audit.

STATUTORY REQUIREMENTS

Books and Records

The Indonesian Corporate Document Law No. 8 year 1997 states that anyone who is carrying on a business is obliged to keep records in such a manner that at any time the rights and obligations of the person may be determined. The manner in which the entrepreneur maintains the records is left to his discretion. No specific books or records are stipulated. The records for a PMDN (Domestic Investment Company) must be kept in Bahasa Indonesia unless approval is obtained to maintain records in English. PMA (Foreign Investment Company) and representative offices may keep records in English if notification is given to the Tax Authorities within a specified time period.

In addition to the obligation to keep records, the entrepreneur is obliged to draw up a balance sheet within six months at the end of the financial year. Books and records and a copy of the annual balance sheets must be retained for 30 years. Copies of correspondence must also be retained for 10 years.

Audited Financial Statements

Business entities are required to have a statutory audit, including companies listed on the capital markets, banks, underwriters, and stockbrokers or any companies having assets of turnover exceeding IDR 50 billion. With regard to PMA there is a Ministerial decree of 2002 under which foreign invested companies, irrespective of their size, need to file an audited statement on a yearly basis. Although the decree currently not appears to be applied in practice, most PMA in Indonesia are engaged with audit in order to comply with group/head quarter requirements on voluntary basis; so called Audit of HB II Financial Statement which is either based on HGB/IFRS.

AUDITING STANDARDS

Generally accepted auditing standards in Indonesia were first published by the Indonesian Association of Accountants in 1974, and the latest revision was in 2013.

Auditing standards, including the form of a typical audit report and the manner in which qualifications are required to be reported, are now in harmony with International Auditing Standards. Certain pronouncements on auditing standards are also made by IAPI, the Indonesian Institute of Certified Public Accountants.

Accounting principles and practices

FORM AND CONTENT OF THE FINANCIAL STATEMENT

Basic Financial Statements

The basic financial statements, prepared in accordance with the requirements of financial statements, consist of the following:

- Balance sheet (statement of financial position),
- Profit & Loss statement (statement of comprehensive income),
- Statement of changes in shareholders' equity,
- Statement of cash flows,
- A description of accounting policies, and
- Notes to the financial statement.

Financial statements are required to include the previous year's figures for comparison purposes.

Capital

Share capital is shown at par value. Amounts in excess of par value are shown as a capital reserve, immediately after share capital. Additional paid-up capital, usually amounts paid prior to final governmental approval of the articles of association, is included in the shareholders' equity section and is usually termed "capital subscribed in advance."

Income Statement

The income statement normally shows the following information (basic structure):

- Net Sales
- Cost of goods sold
- Gross profit
- Selling expenses
- General and administrative expense
- Interest income / expense
- Forex difference
- Other income / expense
- Income (Loss) before income tax benefit
- Net income (Loss)
- Net profit after tax

CONVERGENCE WITH IFRS

Generally, financial statements are prepared on a calendar-year basis, although other year-ends may be used. The accrual basis of accounting is required by the Indonesian Accounting Standards (Pernyataan Standar Akuntansi Keuangan, PSAK). Accounting policies should be disclosed in the financial statements.

Since 1994, PSAK have been harmonized with International Financial Reporting Standards (IFRS). Currently, more than 90 Percent of PSAKs were developed by reference to IFRS. However, some of them still refer to old version of IFRSs or to US GAAP (developed before the comparable IFRSs were issued). Most self-developed PSAKs were developed for specific industries. By harmonizing with IFRS, financial statement prepared based on PSAK will only need a minimum reconciliation to comply with IFRS. At the end it will decrease investment barriers in Indonesia and promote financial disclosures.

The implementation of IFRS has commenced in 2012. Most PSAK have been revised to follow IFRS, by considering local conditions and regulations. PSAK for specific industries, which are in substance already included in IFRS, will be deleted. Guidance may be issued. PSAKs for Land, Equity and Cooperation will not be changed. PSAKs which are not in conformity to IFRS will be revoked.

PSAK have been revised from time to time; as of 1 January 2019, 72 standards have been introduced for mandatory implementation respectively. Subject to the circumstances at Head Quarter level, a German subsidiary in Indonesia may also to consider the adoption of accounting principles for an entity without public accountability, so called "ETAP", which is basically a conversion from accounting for SME according to IFRS.

CONVERSION OF FOREIGN CURRENCIES

Transactions in foreign currency are converted at the rates prevailing at the time of the transaction and at year-end; balances

of foreign currency liabilities and assets are translated at year-end rates. In most instances, unrealized and realized exchange losses / gains are charged against the current year's result.

PSAK 71 FINANCIAL INSTRUMENT

PSAK 71 is adopted from IFRS 9 and effective since January 1, 2018, replacing PSAK 5 Financial Instrument on Recognition and Measurement. PSAK 71 brought significant changes in Classification and Measurement, Declining in Value and Hedge Accounting. It introduced a classification method based on characteristic contractual cash flow and business model entity and a declining value method based on an expected credit loss impairment model.

PSAK 72 REVENUE FROM CONTRACTS WITH CUSTOMERS

PSAK 72 is adopted from IFRS 15 and will be effective from January 1, 2020. It will replace PSAK 34 about Construction Contract, PSAK 23 about Revenue, ISAK 10 about Customer Loyalty Programs, ISAK 21 about Agreements for the Construction of Real Estate and ISAK 27 about Transfer of Asset from Customer. PSAK 72 will provide a single, principle based five-step model to be applied to all contracts with customers, specifying on how and when an entity should recognize revenue, with the following relevant steps:

1. Identify the contract(s) with the customer,
2. Identify the separate performance obligations in the contract(s),
3. Determine the transaction price,
4. Allocate the transaction price,
5. Recognize revenue when (or as) a performance obligation is satisfied.

PSAK 73 LEASES

PSAK 73 is adopted from IFRS 16 and will be effective from January 1, 2020. It will replace PSAK 30 about Leases, ISAK 8, ISAK 23, ISAK 24 and ISAK 25.

PSAK 73 will require the Lessee to capitalize right-to-use asset and lease liabilities at acquisition cost. PSAK 73 will allow not to recognize short-term lease and lease of low value assets.

Appendix

DOUBLE TAXATION AGREEMENTS

List of countries with which Indonesia has an agreement on double taxation avoidance:

- Algeria
- Australia
- Austria
- Belgium
- Brunei
- Bulgaria
- Canada
- China
- Czech Republic

About us

As attorneys, tax advisers, management and IT consultants and auditors, we are present with 109 own offices in 49 countries. Worldwide, our clients trust our 5,120 colleagues.

The history of Rödl & Partner goes back to its foundation as a solo practice in 1977 in Nuremberg. Our aspiration to be on hand wherever our internationally-active clients are led to the establishment of our first, own offices, commencing with Central and Eastern Europe in 1991. Alongside market entry in Asia in 1994, the opening of offices in further strategic locations followed, in Western and Northern Europe in 1998, USA in 2000, South America in 2005 and Africa in 2008.

Our success has always been based on the success of our German clients: Rödl & Partner is always there where its clients see the potential for their business engagement. Rather than create an artificial network of franchises or affiliates, we have chosen to set up our own offices and rely on close, multidisciplinary and cross-border collaboration among our colleagues. As a result, Rödl & Partner stands for international expertise from a single source.

Our conviction is driven by our entrepreneurial spirit that we share with many, but especially German family-owned companies. They appreciate personal service and value an advisor they see eye to eye with.

Our 'one face to the client' approach sets us apart from the rest. Our clients have a designated contact person who ensures that the complete range of Rödl & Partner services is optimally employed to the client's benefit. The 'caring partner' is always close at hand; they identify the client's needs and points to be resolved. The 'caring partner' is naturally also the main contact person in critical situations.

We also stand out through our corporate philosophy and client care, which is based on mutual trust and long-term orientation. We rely on renowned specialists who think in an interdisciplinary manner, since the needs and projects of our clients cannot be separated into individual professional disciplines. Our one-stop-shop concept is based on a balance of expertise across the individual service lines, combining them seamlessly in multidisciplinary teams.

WHAT SETS US APART

Rödl & Partner is not a collection of accountants, auditors, attorneys, management and tax consultants working in parallel. We work together, closely interlinked across all service lines. We think from a market perspective, from a client's perspective, where a project team possesses all the capabilities to be successful and to realise the client's goals.

Our interdisciplinary approach is not unique, nor is our global reach or our particularly strong presence among family businesses. It is the combination that cannot be found anywhere else – a firm that is devoted to comprehensively supporting German businesses, wherever in the world they might be.
